

Google Apps Sign on iPad/iPhone

Note The built in Gmail setup that comes on the iPad and iPhone will not work because of how we have account authentication tied back to Active Directory.

1. If you do not have it already, download the free Gmail or Google Mail app from the Apple App store.

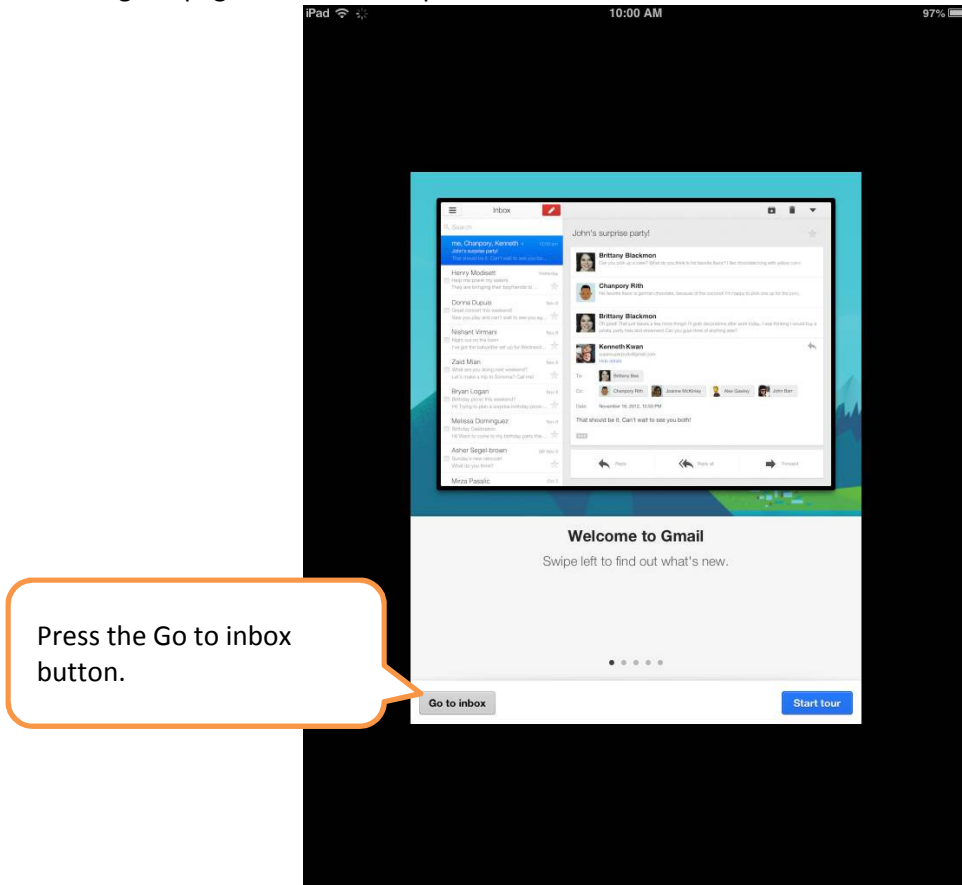

2. Once the App is downloaded, open it. In the email field type in your pilot email address. (first.last@mymailtest.nwtc.edu). **Do not type in your password**, but press on the Sign On button.

- You will be redirected to our custom authentication sign on page. Type in your username and password (Account used to sign into NWTC computers) Press the Sign In button.

- You will get a page like the below picture. Press Go to inbox in the bottom left corner.

- Google Apps is now configured for your NWTC email account. You should not have to set the login information again unless you accidentally choose the logout option within the Google Mail App.
